INTRODUCTION:

Music is a vital part of daily living, as Albert Einstein stated, "*life without playing music would be inconceivable*". There is no one living in this earth who does not listen to any kind of music.

Music Player that plays music as audio files, such as 'MP3' and allow you to listen music files stored in a memory.

PROBLEM:

Listen to the music is relaxing but sometimes it's gonna be exciting also. The Audience listens to music to enjoy their time. The major problem is that audience is not able to listen to audio files such as 'MP3'.

PROPOSED SOLUTION:

As above the problem is discussed. The solution to this problem is a music player. The Music Player can play audio files.

I'm making a music player using the python language and PyCharm (Python IDE). Our team members (Zain Illyas and Khizzar Jamil) are also a part of this project.
